

THE FUTURETT DEVELOPMENT PATHWAY

Building AI Engineering Capability. Creating Real-World Impact.

FutureTT

1

AI Engineering Cohorts

Learn. Build. Collaborate.

01 Practical AI Engineering

Participants develop practical AI Engineering skills through collaborative software development, AI-assisted programming, GitHub workflows, autonomous coding agents and modern development practices.

02 Working in algorithmic environments

The emphasis extends beyond learning AI tools. Participants learn to work effectively in environments where algorithms increasingly facilitate coordination between people.

2

Industry Projects

Apply. Solve. Impact.

01 Real organisational challenges

Participants apply these capabilities to real organisational challenges, working alongside businesses and institutions to develop practical AI-enabled solutions.

02 Experience and insight

These projects provide valuable experience for participants while generating insights into how organisations adapt to AI-mediated workflows.

3

FutureTT Immersive

Accelerate. Deepen. Engineer.

01 Eight-week residential programme

The FutureTT Immersive is an intensive, eight-week residential, project-based AI Engineering programme designed to accelerate participants from capable builders into industry-ready AI Engineers.

02 Mentored, real-world practice

Working alongside experienced mentors on increasingly complex real-world systems, participants deepen their technical capability while strengthening collaboration, problem-solving and AI Engineering practices.

Accelerate. Deepen. Engineer.

4

Employment, Enterprise & Research

Contribute. Innovate. Advance.

01 Multiple routes to contribution

Graduates contribute to local and regional organisations, launch new ventures, support digital transformation and continue contributing to the growing body of knowledge surrounding Algorithmacy.

02 Long-term impact

They become practitioners, innovators and researchers, driving economic growth and advancing the future of human coordination in the age of AI.
